POSSIBLE INCREASE OF THE NUMBER OF READY MISSILES NOTED AT SOME PEIPING
SA-2 SITES

25X1D

Detailed analysis of TR [REDACTED] reveals that two Peiping SAM sites 39-34-10N 116-43-50E and 39-34-00N 116-24-40E have departed from the construction pattern historical in the USSR and East European countries and which had previously been employed in Communist China.

25X1D

Normal SA-2 sites have three drive-through revetted positions capable of holding two missiles each leading into the circular road surrounding the site. At these Peiping sites the Chinese have transferred the missile hold areas to the circumferential road itself and have built a 30'x 60' shed at each position capable of housing 3 GUIDELINE missiles and their tractors and transporters [REDACTED] each). The other launch site components (launchers, radar emplacement, etc.) remain the same.

If these sheds are being used for this purpose this increases the number of ready missiles at these sites from the standard 12 (6 on launchers and 2 within each of the 3 revetted drive through missile hold areas) to 15 (6 on the launchers and 3 within each of the 3 sheds on the circumferential road).

This unique missile hold system has so far been limited to the Peiping sites and has not been noted at any of the 7 other operational or 4 training sites currently estimated within Communist China.
